ANDRII MAKSYMOV

Senior Frontend Engineer | React, TypeScript, Next.js | SaaS & Data Platforms

Ukraine (EET/EEST) | Remote Europe | B2B/FOP | andrii@andriim.dev | https://linkedin.com/in/maksymov-andrii | https://github.com/andriimaksymov | https://andriim.dev

PROFESSIONAL SUMMARY

Senior Frontend Engineer with 9+ years in frontend development, including 6 years specializing in React, TypeScript, and Next.js. Experienced in building and modernizing production SaaS and data-heavy applications, with a strong focus on frontend architecture, design systems, server-state architecture, performance, accessibility, and automated testing. Owns frontend delivery end to end, from technical planning and architecture decisions through implementation, testing, CI/CD, and production release.

TECHNICAL SKILLS

Frontend Core: React 18/19, Next.js 14/15 (App Router, RSC, SSR/SSG/ISR), TypeScript (strict), JavaScript (ES6+), HTML5, CSS3
State & Data: React Query (TanStack Query), Redux Toolkit, Zustand, WebSockets, REST APIs
UI & Styling: Tailwind CSS, shadcn/ui, Material UI (MUI), Radix UI, Framer Motion, CSS Modules
Backend & DB: Node.js, Express.js, PostgreSQL, Prisma ORM, Payload CMS
Testing & Quality: Playwright (E2E), Vitest, Jest, React Testing Library, Storybook
Performance: Core Web Vitals, Lighthouse, bundle optimization, code splitting, lazy loading
DevOps & Tooling: GitHub Actions (CI/CD), Vercel, Cloudflare Workers
Practices: Agile/Scrum, accessibility (WCAG), SEO, component library design, technical planning
AI-Assisted Dev: Claude Code, Codex, Copilot, Cursor for code review, refactoring, debugging, and test generation

WORK EXPERIENCE

Senior Frontend Engineer | Aivo

Jun 2024 – Present | Part-time contract Jun 2024–May 2026; primary engagement since Jun 2026

- Architected and built the platform's flagship data-analysis workspace, including a virtualized ledger, pivot engine, governed saved views, working-paper annotations, and account mapping; established it as the reference feature-sliced architecture for the frontend.
- Drove a live audit platform from 11% to 99% strict TypeScript across a 1,500-file production frontend, in six tracked migration milestones with zero feature freeze, while leading the React 17 to 18 cutover.
- Built the frontend testing foundation from zero on a four-year-old codebase, introducing unit tests, Storybook interaction and axe checks, Playwright E2E with page objects, and an enforced multi-gate CI pipeline.
- Consolidated three styling stacks into a 49-component MUI v7 design system with a Figma-to-theme design-token pipeline, eliminating Ant Design and progressively removing legacy SCSS.
- Standardized server state on React Query with lint-enforced query key factories and socket-scoped cache invalidation, then removed Redux in favor of Zustand and URL state.
- Introduced i18next internationalization for EN and DE into a previously monolingual production app, and wrote engineering documentation covering architecture, migration strategy, testing, and ADRs.

Senior Frontend Engineer | Movadex

May 2022 – Jun 2026 | Remote | Full-time

- Built a multi-tenant community-management SaaS frontend from first commit to production in React 19 and strict TypeScript, owning 13 product domains and 46 routes end to end.
- Designed single-deployment multi-tenancy with runtime tenant theming, configurable privacy rules, and tenant-specific settings across multiple audience groups.
- Architected a fully typed React Query API layer spanning 200+ endpoints, and owned the HTTP client with transparent JWT refresh/replay, exponential-backoff retries, and normalized typed errors.
- Integrated AI features across OpenAI, Gemini, and Groq behind a shared provider abstraction with per-provider web-search grounding, powering meeting analysis, action-item extraction, and content enrichment.
- Served as sole frontend engineer on a humanitarian aid-logistics platform delivered in six months, covering role-based workflows, inventory, legal documents, regional mapping, and EN/UK localization.
- Also delivered a customer-facing analytics platform and a German-market Next.js SSR/SSG search platform with Lighthouse scores above 90 and sub-second LCP in a seven-engineer team.

Frontend Engineer (Mid-level) | Rivo Agency

Oct 2021 – Apr 2022 | Rivne, Ukraine

- Contributed to an internal CRM, delivering frontend features and participating in technical planning and implementation decisions.
- Extended and refactored a growing Next.js beauty-services platform, improving maintainability as the product evolved.
- Built multiple Next.js landing pages with Lighthouse scores above 92 and green Core Web Vitals, and contributed frontend improvements to a US B2C application.

Frontend Developer | PRO-IT

Jul 2017 – Sep 2021 | Rivne, Ukraine

React Developer | *Nov 2020 - Sep 2021*

- Moved from HTML and CSS work into React and Next.js, and built reusable UI components and production-ready customer-facing pages.
- Built a Next.js website for a B2B video-player product that helped customers understand the product and set up integration options.
- Developed an integration page where users could pick video-player settings and generate an embed script for their own websites.

HTML/CSS Developer | *Jul 2017 - Oct 2020*

- Built responsive HTML and CSS markup, email templates, reusable layout patterns, and shared CSS libraries for production websites.
- Worked on a large B2C video-hosting product with a focus on markup, responsive layout, animation, and web performance.
- Built responsive and reusable markup for a custom web video player across desktop, tablet, and mobile, and optimized structure and assets for faster loading and better cross-browser stability.

SELECTED PROJECTS

GitMerit | Developer Profile Intelligence Platform

React 19 | NestJS 11 | TypeScript | TanStack Query | Tailwind CSS | PostgreSQL | AI/LLM

Live: gitmerit.vercel.app | Code: github.com/andriimaksymov/gitmerit

- Built a full-stack platform that turns GitHub activity, LinkedIn profiles, and resume PDFs into hiring-ready scores with evidence-backed, actionable fixes.
- Separated deterministic four-dimension scoring from AI insights, with AI output groundedness-checked against real repository evidence and a multi-provider fallback chain (OpenRouter, OpenAI, Gemini, Groq) so the full product works even with zero API keys.
- Resume review renders a side-by-side original vs. improved diff with click-to-explain changes; backed by unit, API integration, and Playwright E2E suites running in CI.

Pawbase | Full-Stack Pet Health Management Platform

Next.js 15 | TypeScript | PostgreSQL | Prisma | shadcn/ui | Vercel

Live: pet-life-jade.vercel.app

- Built the platform end to end on the Next.js 15 App Router, from relational Prisma schema design to server components, server actions, API layer, and an accessible UI for pets, appointments, and health records.

JSON UI Forge | JSON-to-UI Developer Tool

React | TypeScript | Vite | Tailwind CSS | Cloudflare Workers (Edge)

Live: json-ui-forge.andrii-maksymov-1.workers.dev | Code: github.com/andriimaksymov/json-ui-forge

- Built a developer tool that turns pasted JSON into an editable form, a table preview, TypeScript interfaces, and generated React component code, with rich previews for images, SVG, and links.
- Deployed on Cloudflare Workers edge infrastructure; type checking, linting, tests, and coverage gates run on every change.

LANGUAGES

English — Professional working proficiency; Ukrainian — Native

EDUCATION

National University of Water Management and Natural Resources - M.Sc. in Hydropower Engineering, 2011 - 2017
