Andrii Maksymov

Senior Frontend Engineer · React, TypeScript, Next.js

Ukraine (UTC+2/+3) · Remote, open to roles worldwide · B2B contractor or employer of record (EOR)
andrii@andriim.dev · andriim.dev · linkedin.com/in/maksymov-andrii · github.com/andriimaksymov

SUMMARY

Senior frontend engineer, 9+ years in web development, 6 in React and TypeScript, mostly on data-heavy B2B SaaS. Founding, sole or lead frontend engineer on several products, owning architecture, typing and tests. Daily AI-agent workflow under the same checks and review as hand-written code. Remote since 2022, async and written-first.

SKILLS

- **Frontend:** TypeScript (strict), JavaScript, React, Next.js (App Router, React Server Components, SSR), HTML, CSS
- **State management and data:** TanStack Query, Zustand, Redux Toolkit, React Hook Form, Zod, REST, WebSockets
- **Testing:** Jest, Vitest, React Testing Library, Playwright, Mock Service Worker (MSW), axe
- **Quality:** accessibility (WCAG 2.1 AA), performance (Core Web Vitals, virtualization), i18n, Feature-Sliced Design
- **UI and design systems:** MUI (Material UI), Tailwind CSS, shadcn/ui, Storybook, Figma tokens, TanStack Table
- **AI-assisted development:** Claude Code and OpenAI Codex (daily), Cursor, GitHub Copilot
- **Build and delivery:** Vite, Webpack, monorepos, CI/CD (GitHub Actions), AWS Amplify, Vercel
- **Backend (working knowledge):** Node.js, NestJS, Express, PostgreSQL, Prisma, Supabase, LLM APIs

EXPERIENCE

Senior Frontend Engineer, aivo Revisions AG (Swiss audit SaaS, Zurich) | Remote | Jun 2024 – Present

Part-time contract alongside the full-time Movadex role Jun 2024 – May 2026; main engagement since Jun 2026.

Stack: React 18, TypeScript, TanStack Query, Zustand, MUI, Storybook, Jest, Playwright, AWS Amplify

- **Data-analysis workspace:** led the frontend of the product's new module for audit data work outside Excel (ledger import, validation, account mapping, pivot tables, saved views), now the template for new features.
- **TypeScript migration:** took a live 1,500-file app from 11% to 99% strict TypeScript in six milestones without a feature freeze, and ran the React 17 to 18 upgrade.
- **Testing from zero:** wrote ~520 of 620 test files and most of the Playwright end-to-end (E2E) suite on a four-year-old codebase; one test checks every imported account total against an independent calculation.
- **AI-assisted delivery:** designed and run a Claude Code and Codex agent workflow (regression tests, a separate review pass, lint and typecheck before merge). Coverage went from 31% to 67% (Jul–Oct 2026).
- **Frontend architecture:** moved all server state to TanStack Query, replaced Redux with Zustand and URL state, and merged three styling stacks into one MUI design system of about 50 components.
- **API contracts:** added Zod validation on API responses and a contract test registry checked against the OpenAPI spec; it caught three places where the client had silently drifted from the API.
- **Performance and accessibility:** fixed an editor render loop that hit ~400 re-renders per second, virtualized the ledger table, and made any new axe violation fail CI.
- **Ownership:** 510 merged PRs since June 2024, about half the repo's total. Own the frontend CI/CD (GitHub Actions, AWS Amplify) and wrote the testing and architecture docs plus three decision records (ADRs).

Senior Frontend Engineer, Movadex (product agency) | Remote | May 2022 – Jun 2026

Full-time.

Stack across projects: React 19, TypeScript, Next.js, Vite, Tailwind, MUI, TanStack Query, Zustand

- **Founding frontend engineer:** built a multi-tenant peer-forum SaaS for business executives from first commit to production (React 19, strict TypeScript, Vite, Tailwind, TanStack Query). Wrote over 90% of the 52k-line codebase (733 commits; 185 of 196 PRs).
- **Product scope:** owned 13 product domains and 46 routes, including the super-admin panel, meeting-cycle forms, engagement analytics, a rich-text community feed and data import with row-level validation.
- **Multi-tenancy:** designed a single-deployment setup with runtime tenant theming and per-tenant privacy rules.
- **API layer:** wrote a typed TanStack Query layer over 200+ endpoints and the HTTP client under it, with silent JWT refresh and request replay, retries with backoff, and normalized typed errors.
- **AI features:** shipped meeting analysis, action-item extraction and reminder drafts on OpenAI, Gemini and Groq behind one provider interface with ordered fallback and per-attempt timeouts.
- **Aid-logistics platform:** sole frontend engineer on a humanitarian platform delivered in six months (role-based workflows, inventory, legal documents, maps, EN/UK).

- **Other projects:** a customer-facing analytics platform, a German-market Next.js SSR/SSG search site (Lighthouse 90+, LCP under 1 s) and an e-commerce site on the Next.js App Router with Payload CMS and Stripe.
- **Mentoring:** supported junior developers for a short period, sharing practices and helping them through their tasks.

Frontend Engineer, Rivo Agency | Oct 2021 – Apr 2022

- Refactored a Next.js beauty-services platform and built landing pages that scored Lighthouse 92+ with green Core Web Vitals. Also built CRM features and took part in technical planning.

Frontend Developer, PRO-IT | Rivne, Ukraine | Jul 2017 – Sep 2021

React Developer Nov 2020 – Sep 2021; HTML/CSS Developer Jul 2017 – Oct 2020.

- Moved from HTML/CSS into React and Next.js. Built a B2B video-player product site and an embed-script generator, and wrote responsive markup and shared CSS for a large B2C video-hosting product.

PROJECTS

GitMerit, developer-profile scoring platform · gitmerit.vercel.app · github.com/andriimaksymov/gitmerit

- React 19 + NestJS 11 monorepo that scores GitHub, LinkedIn and résumé evidence. Scoring is deterministic and kept apart from the AI explanations. The LLM layer falls back across four providers with JSON-schema output, Zod validation and groundedness checks, and the app still works with no API keys.

Pawbase, pet-health platform · pet-life-jade.vercel.app

- Full-stack Next.js 16 app: 32-model Prisma schema, Auth.js, presigned S3 uploads, rate limiting, 4 locales and revocable emergency-share pages. Playwright and axe run in CI.

EDUCATION

M.Sc., Hydropower Engineering, National University of Water Management and Natural Resources | 2011 – 2017

LANGUAGES

English: B2 (upper-intermediate), used daily at work · Ukrainian: native
