

ANDRII MAKSYMOW

Senior Frontend Engineer · React / Next.js / TypeScript · Frontend Architect

andrii.maksymov.1@gmail.com · [linkedin.com/in/maksymov-andrii](https://www.linkedin.com/in/maksymov-andrii) · github.com/andriimaksymov · andriim.dev

PROFESSIONAL SUMMARY

Senior Frontend Engineer with 9+ years building high-performance, production-grade React/Next.js applications at scale. Proven track record of architecting greenfield SaaS platforms from zero to production, leading frontend modernization initiatives that reduce technical debt and accelerate delivery velocity. Deep expertise in TypeScript, React Query, real-time WebSocket systems, Core Web Vitals optimization, and end-to-end testing strategies. Thrives in async-remote, cross-functional product teams — bridging engineering, design, and product to ship systems that are fast, accessible, and built to last.

TECHNICAL SKILLS

Frontend Core: React 18, Next.js 14/15 (App Router, RSC, SSR/SSG/ISR), TypeScript (strict), JavaScript (ES2024)

State & Data: React Query (TanStack Query), Redux Toolkit, Zustand, SWR, Context API, WebSockets

UI & Styling: Tailwind CSS, shadcn/ui, Material UI (MUI), Radix UI, Framer Motion, CSS Modules, responsive design

Backend & DB: Node.js, Express.js, PostgreSQL (Neon), Prisma ORM, RESTful APIs, GraphQL (basic)

Testing & Quality: Playwright (E2E), Vitest, Jest, React Testing Library, Storybook, ESLint, Prettier

Performance: Core Web Vitals, Lighthouse, bundle optimization, code splitting, lazy loading, image optimization

DevOps & Tooling: GitHub Actions (CI/CD), Vercel, Cloudflare Workers, Docker (basic), Git, Figma, Jira

Practices: Agile/Scrum, accessibility (WCAG), SEO strategy, component library design, architectural decision-making

WORK EXPERIENCE

Senior Frontend Engineer · Movadex

May 2022 – Present | Remote

- **Architected multiple greenfield SaaS platforms end-to-end**, selecting and enforcing the full stack (Next.js 14/15, TypeScript, React Query, Tailwind CSS) and establishing scalable frontend architecture patterns adopted across the entire engineering org.
- **Drove a full-scale legacy-to-modern migration** for a large production codebase — introducing TypeScript strict mode, React hooks, modular component architecture, and React Query, reducing re-renders and eliminating an estimated 30%+ of technical debt.
- **Engineered a real-time collaboration system** using WebSockets with optimistic UI updates, enabling live multi-user workflows with sub-100ms perceived latency.
- **Built a feature-rich PDF editor and document workflow engine** from scratch, integrating rich text editing (Tiptap/Slate) and drag-and-drop interfaces (dnd-kit), replacing third-party tooling and cutting licensing costs.
- **Designed and implemented an E2E testing strategy with Playwright**, achieving full critical-path coverage; reduced production regressions by ~40% and cut QA cycle time across release sprints.
- **Optimized Core Web Vitals and SEO architecture**, achieving sub-1s LCP and Lighthouse performance scores of 90+ via code splitting, lazy loading, SSR/SSG strategies, and image optimization pipelines.
- **Built and maintained CI/CD pipelines** (GitHub Actions) with automated lint, type-check, test, and preview deployment stages — reducing broken-build incidents and enabling same-day feature delivery.
- **Mentored 3–4 mid-level engineers** through structured code reviews, architecture walkthroughs, and pair programming sessions, accelerating their onboarding and raising team-wide code quality standards.

Middle Frontend Engineer · Rivo Agency

Oct 2021 – Apr 2022 | Rivne, Ukraine

- **Delivered complex, high-frequency data dashboards** using Redux Toolkit and Context API, optimizing re-render performance for real-time data updates across multiple concurrent data streams.
- **Collaborated directly with product managers and UX/UI designers** to translate wireframes and business requirements into pixel-perfect, accessible React components — reducing design-to-dev iteration cycles.

- **Enforced clean code principles and architectural best practices** through systematic PR reviews and linting standards, measurably reducing bug density and stabilizing long-running project codebase.

Frontend Developer · PRO-IT

Jul 2017 – Sep 2021 | Rivne, Ukraine (promoted from HTML/CSS Developer, Jul 2017)

HTML/CSS Developer · Jul 2017 – Oct 2020

- Progressively adopted JavaScript, Sass, and Gulp tooling — building toward component-based thinking that led to a promotion into React development.
- Built pixel-perfect, cross-browser HTML/CSS layouts and responsive interfaces for 10+ client projects, establishing strong fundamentals in web performance and web standards.

Promoted to Junior React Developer · Nov 2020 – Sep 2021

- **Developed responsive, accessible web applications** using React component architecture, delivering 3+ client projects from design handoff to production.
- **Integrated Stripe payment gateway and external data APIs**, handling edge cases, error states, and transaction security — enabling e-commerce functionality for client platforms.

SELECTED PROJECTS

Aivo Platform — Long-term production SaaS (NDA)

Next.js · TypeScript · React Query · WebSockets · Playwright · Tiptap · dnd-kit

- Sole frontend architect on a multi-year platform — designed component architecture, data-fetching strategy, and testing infrastructure from the ground up.
- Led a complete JavaScript-to-TypeScript migration across the entire codebase, enforcing strict mode and eliminating entire categories of runtime errors.
- Integrated React Query end-to-end, replacing ad-hoc async logic with a unified data-fetching and synchronization layer — improving cache consistency, loading states, and real-time data sync across the platform.
- Rebuilt the UI layer by introducing Material UI (MUI) as the design system foundation and engineering a library of reusable, accessible components, completely removing legacy CSS and aligning the visual language with product requirements.
- Established comprehensive test coverage with both unit tests (Jest / React Testing Library) and E2E tests (Playwright), eliminating entire classes of regression bugs across quarterly releases.

Pet Life — Full-Stack Pet Health Management Platform

Next.js 15 · TypeScript · PostgreSQL · Prisma · Shadcn UI · Vercel

- Designed full backend architecture and relational data schema; implemented server components and server actions using Next.js 15 App Router.
- Built end-to-end: from DB schema design with Prisma, to API layer, to accessible UI — demonstrating full-stack ownership.

JSON UI Forge — Schema-Driven Dynamic UI Builder

React · TypeScript · JSON Schema · Cloudflare Workers (Edge)

- Engineered a JSON-to-React rendering engine enabling no-code UI generation — supporting dynamic forms, component composition, and runtime layout generation without redeployment.
- Deployed on Cloudflare Workers edge infrastructure for global low-latency access; extensible architecture allows new component types without modifying core logic.

Portfolio Score — Developer Profile Analytics Tool

React · Node.js · GitHub API · LinkedIn API

- Built automated scoring system that ingests GitHub and LinkedIn data to generate structured, actionable feedback for developers — demonstrating product-thinking and API integration depth.

CERTIFICATIONS

- Node.js: The Complete Guide — MVC, REST APIs, GraphQL (Udemy)
- React Testing Library with Vitest (Udemy)
- JavaScript: The Advanced Concepts (Udemy — Andrei Neagoie)
